SEMINAR

Wednesday 6 October 2010 at 13.15 in room 1048.

Daniel Thorburn, Stockholm University

Estimation in sample surveys with non-response

I will give a short review of the area and cover methods like real and model donor, multiple imputation, propensity score and calibrations, i.e. methods that rely on the assumption of MAR (missing at random) but I will also give some examples of what can be done in other cases.

Welcome!
